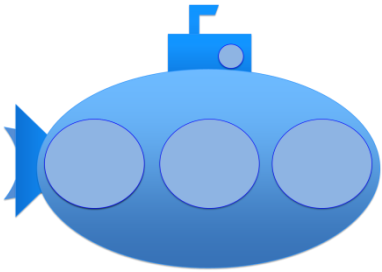
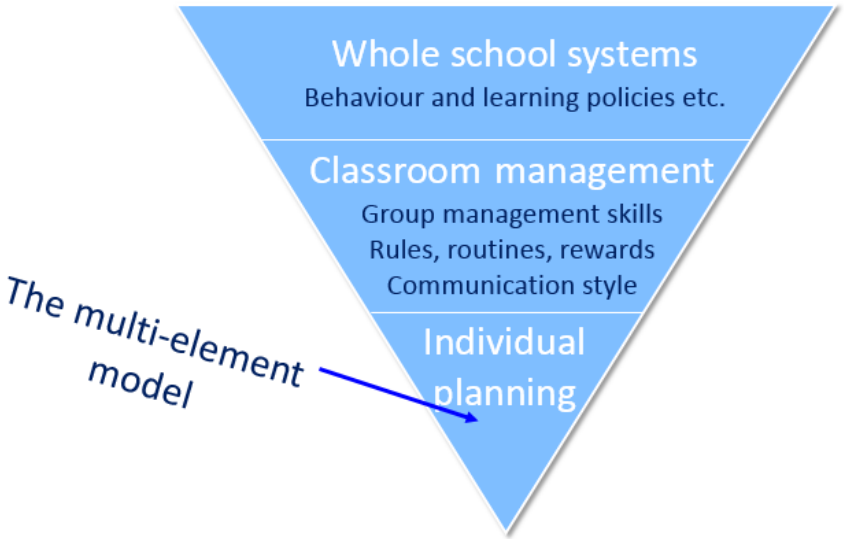
A short introduction to the

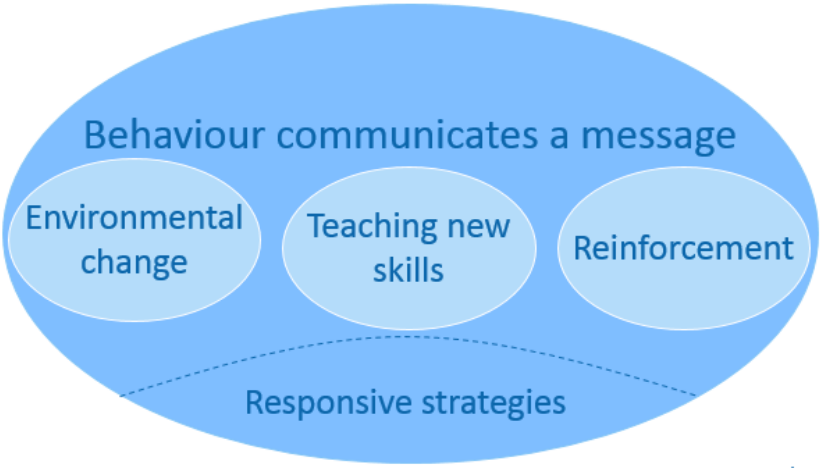
Multi-element model of behaviour change

Tim Cooke
Southampton Psychology Service



Remember the context





Behaviour communicates a message
Environmental change
Teaching new skills
Reinforcement
Responsive strategies

Hearing the message

What is the child trying to tell you?

What do they need you to know?

Changing the environment

How can you change the environment to make the behaviour no longer necessary?

1.

2.

3.

4.

Teaching new skills

There are three main types of new skill:

1.

2.

3.

Some general rules when teaching new skills:

- Plan for generalisation (teach in different contexts, with different people)
- Try to strengthen existing behaviours, rather than start brand new ones
- Make the new skill as easy as possible

Reinforcement

It is usually harder to practise a new behaviour than it is to use an old habit.

So make it more rewarding with one of the five types of reward:

1.

2.

3.

4.

5.

And remember the positives and negatives.

Responsive strategies

Don’t be insane!

Choose approaches that help you get back to the plan.

Choose the best time to help the child learn.
